

Participation

This document describes ways to engage with the Brisart ecosystem beyond simply running software or studying official releases.

Nothing in this document grants, modifies, or restricts any legal right. For licensing terms, permissions, restrictions, subscription rights, and commercial-use rights, refer to ``LICENSE.md``.

Donations

Donations support ongoing development of the Brisart ecosystem — new tools, research and experimentation, long-term maintenance, and documentation.

A donation is not a subscription. It doesn't come with technical support, guaranteed features, or any right described in ``LICENSE.md``, including the right to submit implementation requests.

If the ecosystem is useful to you and you'd like to support its continued development, a donation is one way to do that. Anyone can donate, subscriber or not.

Implementation Requests

Implementation requests are how active subscribers suggest future capabilities for Brisart software.

Submitting one requires an active subscription. See ``LICENSE.md``.

What to Suggest

- New features
- New workflows
- New tools
- Ecosystem integrations

Example areas include:

- Local identity records
- Offline authentication
- Research archive features
- Preservation utilities
- Developer automation

How Requests Are Reviewed

Brisart considers:

- Alignment with ecosystem priorities
- Local-first operation
- Auditability
- Maintainability
- Long-term value
- Relevance to research, archival, identity, and preservation workflows

No Guarantee

Submitting a request does not mean it will be built.

Brisart may accept, reject, modify, defer, combine, or reinterpret any request based on ecosystem priorities.

Implementation requests influence product direction. They are not support tickets, bug reports, or consulting engagements.

Research Participation

Brisart Frameworks may be read and studied by researchers, students, labs, institutions, and independent investigators.

Reading and studying a framework does not grant any right to modify, adapt, extend, implement, test, validate, commercialize, redistribute, or otherwise create Brisart-Derived Work.

Any activity beyond reading and studying the officially published framework requires the appropriate rights described in `LICENSE.md`.
