

Brisart Ecosystem License

This is the single license governing use of the Brisart ecosystem:

- BrisartResearchArchive
- BrisartDevTools
- BrisartPreservationTools
- BrisartIdentityTools
- BrisartFrameworks

and any future Brisart project unless that project explicitly states otherwise.

Definitions

Brisart-Derived Work means any fork, modification, adaptation, reimplementation, rewrite, derivative work, successor work, replacement work, framework, methodology, specification, workflow, implementation, software, product, service, or other work created wholly or partially from Brisart software, Brisart Frameworks, source code, architecture, methodologies, implementation details, or knowledge obtained through access to Brisart materials.

1. Free, No Subscription Required

Anyone can, at no cost and for non-commercial purposes only:

- Download and run official releases
- Read published source code
- Read and study published Brisart Frameworks
- Use official releases as published

That's it.

No forking. No modifying. No adapting. No extending. No implementing. No testing. No validating. No publishing derivative research. No redistributing. No commercializing. No creating Brisart-Derived Work.

Reading official releases as published and reading or studying published frameworks is the entire free grant.

2. What a Subscription Unlocks

An active subscription grants the right to:

1. Fork, modify, adapt, implement, or extend Brisart software and frameworks
2. Create Brisart-Derived Work
3. Publish, distribute, host, maintain, or otherwise make Brisart-Derived Work available
4. Sell or commercialize Brisart-Derived Work
5. Submit implementation requests

These rights exist only while the subscription remains active.

None of these rights are permanent. They are rented, not owned.

3. If You Cancel

Everything in Section 2 stops the moment your subscription lapses, expires, or is cancelled.

There is no grandfathering.

If you created, published, distributed, hosted, maintained, sold, licensed, commercialized, or otherwise made Brisart-Derived Work available while subscribed, those activities must stop when the subscription ends unless you resubscribe.

Academic publications, research papers, validation studies, implementations, derivative frameworks, and other Brisart-Derived Work are subject to the same subscription requirements as commercial works.

If a subscription expires, lapses, or is cancelled, the right to continue publishing, distributing, hosting, maintaining, or otherwise making such Brisart-Derived Work available also ends unless the subscription is renewed.

Resubscribing restores the applicable rights going forward. It does not retroactively cover any period during which no active subscription existed.

4. Pricing

Tier	Price	Who it's for
Individual	\$49.99/month	1 person
Research Lab	\$499.99/month	Up to 15 people
Institutional	\$4,999.99/month	Unlimited people

Every tier grants the same rights. Price and seat count are the only differences.

5. Everything Else

- Official releases only come from Brisart-controlled repositories, websites, or explicitly authorized distribution channels.
- Donations are separate from subscriptions. Donations grant no rights under this license.
- Subscription month means the period from the date you subscribe to the same calendar date in the following month.
- Terms may be modified by Brisart at its sole discretion. Changes do not affect the subscription period already in progress and take effect at the next renewal or subscription purchase.
- Future Revenue Sharing Notice. Brisart reserves the right to introduce a revenue sharing requirement at future renewals, which may reach or exceed fifty percent (50%) of net revenue. No such requirement is currently in effect. Organizations, researchers, institutions, and commercial entities planning to commercialize Brisart-Derived Work should factor this possibility into their long-term planning before subscribing.
- Subscriptions are owned and controlled by the subscriber that purchases them. Individual subscriptions belong to the individual subscriber. Research Lab subscriptions belong to the purchasing laboratory. Institutional subscriptions belong to the purchasing institution. Subscriptions are non-transferable.

- Multiple Individual subscribers may collaborate on Brisart-Derived Work only while all participants maintain active subscriptions. All participants must be identified on the resulting work. If any participant's subscription ends, the jointly created work may no longer be published, distributed, hosted, maintained, commercialized, or otherwise made available until all participants again maintain active subscriptions.
